

HighJump Warehouse Advantage Express

HIGHJUMP™ WAREHOUSE ADVANTAGE EXPRESS IS DESIGNED SPECIFICALLY FOR SMALL AND MID-SIZED WHOLESALE DISTRIBUTION OPERATIONS AND THE PARTICULAR NEEDS AND CHALLENGES THAT THEY FACE.

HighJump Warehouse Advantage Express: Advanced Technology, Simplified Deployment and Maintenance

- The warehouse management features growing businesses need
- Affordably priced for small and mid-sized businesses
- Built upon the same technology as our Tier 1 WMS, so you can add features to your system without the need to re-implement
- Deployable in as few as 45 days – configured to your requirements for rapid return on investment
- Exceptional ongoing support from HighJump Software

The Fundamentals of Warehouse Management—Rapidly Implemented and Configured to Your Needs

Even in smaller distribution operations, there are increasing pressures from customers and suppliers, as well as time-consuming manual processes, which can squelch your ability to compete. Running your facility without technology—or with dated applications—can lead to inaccurate information, high labor costs, slow fulfillment and an inability to quickly adapt to changing customer demands. You must find a way to optimize your distribution operations without wiping out your budget and slowing down your operations amid a long implementation. Leveraging technology must benefit your operation now, yet support future growth and change.

Forward-thinking small and mid-sized companies are leaving behind paper-based processes and legacy systems and turning to best-of-breed warehouse management systems (WMS) to run distribution more efficiently and support growth. HighJump™ Warehouse Advantage Express is designed specifically for small and mid-sized wholesale distribution operations and the particular needs and challenges that they face.

Warehouse Management Benefits for Growing Businesses

HighJump Warehouse Advantage Express delivers key warehouse management functionality with the benefits of rapid implementation and a flexible pricing structure. Equipping your facility with a WMS delivers continuous benefits, including tracking and visibility into inbound orders, accurate receiving, precise put-away, rapid picking, shipping and replenishment.

Grow Into Enterprise-Level WMS

Your business may not require a laundry list of complex warehouse management features when making the transition to an automated system. An overabundance of features too soon can lengthen deployment timeframes and fail to deliver the expected value. HighJump Warehouse Advantage Express delivers just the solution set you need to run your business and acclimate to a system. When you are ready, HighJump Software can help you leverage more complex warehouse management capabilities and transition to HighJump's enterprise-level WMS.

HighJump Warehouse Advantage Express Feature	What it Means for you
Tracking and visibility of inbound orders	Eliminate manual, error-prone processes by interfacing directly with your host system.
Receiving	Automatically validate receipts against orders, assuring inbound accuracy.
Directed put-away	Ensure the right materials are put away in the right location, increasing inventory accuracy and reducing warehouse traffic. Materials can be put away using a variety of algorithm choices, including FIFO and LIFO.
Picking	Improve picking whether you pick by order, batch or label. Strengthen customer service with higher order accuracy and improve workforce productivity by minimizing time spent searching for material.
Packing/shipping	Coordinate packing and shipping processes to increase fill rates and cut preparation time for shipping documents and ship confirmations.
Replenishment	Replenish materials automatically so associates have sufficient inventory to fill orders, and short-shipped orders are minimized.
Inventory control	Achieve up to 99+ percent inventory accuracy, visibility and traceability.
Real-time online visibility tools	Make strong decisions with insight into key metrics. The system captures every transaction in the warehouse and presents operational information in a meaningful, clear, Web-based manner.
Web Development Tool	Edit and create pages quickly and easily so users see information in the terminology and format to which they are accustomed.

Up and Running in as Few as 45 Days

While standard warehouse management implementations can extend for many months, HighJump Warehouse Advantage Express is designed for swift deployment, while still providing personalized configuration to fit your particular processes. And, because you may not have a devoted team of system administrators, HighJump Warehouse Advantage Express is easy to maintain, with all features supported by HighJump Software's detailed implementation playbook and user guide.

HighJump Software: Your Trusted Partner for Future Growth

With HighJump Warehouse Advantage Express, additional HighJump solutions are simply built onto your existing foundation without the need to engage with a new vendor. If, in the future, your warehousing needs become more complex, you can transition to HighJump's enterprise-level WMS, as well as add modules from the HighJump Supply Chain Advantage suite.
