

HighJump Warehouse Advantage

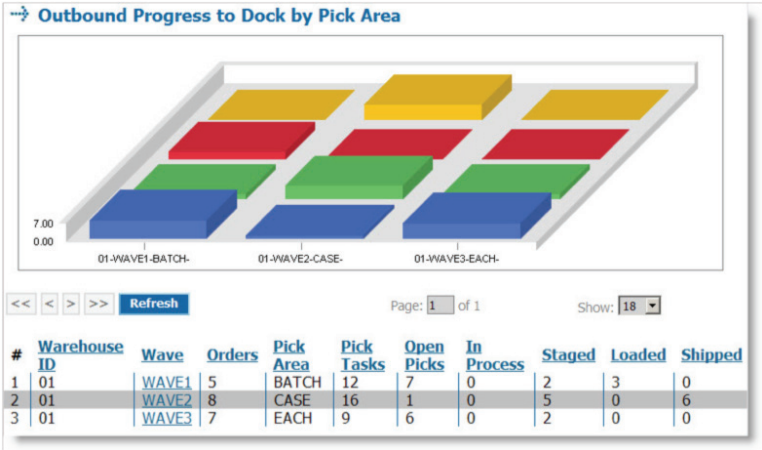

HighJump understands warehouse management as well as any provider in the world. HighJump™ Warehouse Advantage manages some of the most highly-regulated and complex distribution environments in the world. HighJump provides the means to ensure fast, accurate fulfillment through directed, optimized workflow. The HighJump warehouse management system gives companies across industries a foundation of best practices for receiving, put-away/flow-through, inventory management, order processing, replenishment, pick/pack, loading and shipping, as well as the ability to build their own industry-leading businesses processes using our adaptability tools.

Support for International Operations

HighJump Software offers full support for your multinational facilities and supply chain processes. HighJump operates in multiple geographies, which gives you the assurance that both your domestic and international operations can be effectively supported. HighJump Warehouse Advantage has been fully Unicode-enabled and ships with nine languages, including English, Japanese, simplified Chinese, Czech, Spanish, French, Italian, German, Dutch and Portuguese.

Exceed Best Practices Using HighJump Adaptability Tools

While the robust standard functionality of HighJump Warehouse Advantage incorporates industry best practices, HighJump also empowers you to go above and beyond typical business processes by building your own unique workflows into the system. HighJump Software's core architecture enables you to easily adapt the system to meet your specific needs—without the use of custom code—in a fraction of the time of conventional systems, and at a fraction of the cost. And because all changes are external to the core software, upgrades and support are not compromised. This helps keep total cost of system ownership low.

Comprehensive Warehouse Management Functionality

- **Receiving**
 - ASN receipt
 - Vendor receipt
 - Unknown receipt
 - Production receipt
- **Returns**
 - Customer return
 - Production return
